

How did you join the Supply Chain arena?

I studied Chemistry (#womaninscience!) and wanted to do something quite different after my degree – so I joined Mars and was fortunate to experience 4 different roles across Supply, Supply Chain & Demand in my first few years.

I was immediately drawn to supply (for the reasons outlined in the green box!), and so moved into a shift management role in a chocolate factory – can you think of anything more exciting?!

Following this, I moved into a Logistics Manager role which was fantastic! I loved the breadth – working on topics like improving our inbound supply chain to preparing for Brexit.

I'm now responsible for global processes across supply and for our external manufacturing strategy – I feel very grateful to be working for a company that places such importance on continuous learning & development.

Which statement motivates or inspires you?

“Vulnerability is not about winning or losing. It's having the courage to show up when you can't control the outcome.”

Brené Brown

Global Industrial Engineer
(Supply Strategy) – Mars Food

What are you passionate about in SC?

- **The perspective:** sitting in between supply and demand means you get a real feel for how the total business is operating – this is quite unique!
- **It's tangible!** What I love about supply & supply chain is that you can see & feel the progress you are making daily – we are talking about physical goods moving around the network.
- **The diversity:** no working day is the same – and I love that level of challenge. Often in supply chain you are working across several countries & cultures, so there is a lot to learn from others beyond the functional!
